Education

Rutgers University-New Brunswick

09/2015 - 05/2019

— B.E. in Mechanical Engineering & B.S. in Computer Science
GPA: 3.83/4.00

Relevant Coursework: Data Structures, Computer Architecture, Discrete Structures, Probability Theory, Artificial Intelligence, Dynamics, Circuits

Skills

Advanced: C/C++, Java, Javascript, C#, Matlab
Proficient: PHP, Python, R, HTML/ CSS, ABAP

Technologies: OpenCV, TensorFlow, CUDA, Unity, Node.js, AWS
Other: Solidworks, Simulink, ANSYS, V-REP

Experience

Colgate-Palmolive - Software Engineering Intern - Piscataway, NJ

06/2017 - Present

- Built and designed OMNIPAL in Node.js, an all-knowing web application that uses natural language to expose the HANA database
- Extended OMNIPAL using TensorFlow to predict order failures, create status reports, and produce on demand prediction models
- Implemented machine learning models such as Naive Bayes in R to predict employee retention rate

PRACSYS under Professor Kostas Bekris - Research Assistant - New Brunswick, NJ

06/2017 - Present

- Designed a path planner for Baxter's arm, a multi-jointed robotic arm with nine degrees of freedom, using a PDE solver
- Integrated path planning algorithms into VREP, an extensive robot simulator

SteerSuite under Professor Mubbasir Kapadia - Research Assistant - New Brunswick, NJ

06/2016 - 08/2016

- Reduced simulation time by 17% by implementing bounding boxes and Dynamic Bounding Volume Hierarchies
- Developed an algorithm that uses directed graphs to model human behavior in rooms
- Designed and coded a C# plugin for Autodesk Revit to incorporate SteerSuite and make it user friendly

AllState - Data Analysis Intern - Edison, NJ

06/2014 - 09/2014

- Increased customer service productivity by 25% using an algorithm that determines which customers are likely to switch insurance
- The algorithm would use a custom score to sort potential customers and optimize with feedback from customer service

Projects

Speed Prediction - github.com/belalmksaid/speed_prediction

07/2017 - Present

- Predicted instantaneous speed of a moving car from a live dashcam video within ± 1 mile accuracy by using Farneback optical flow, deep learning network in Caffe, and exponential moving average

Internet of Things - github.com/belalmksaid/iot

01/2014 - 03/2017

- Connected home electronic devices such as lamps, a fridge, a microwave, and a minivan to the internet using electrical IMPs and mapped them to a Node.js server
- **Won Internet of Things award from Microsoft and Intel**

Waec - github.com/belalmksaid/waec

06/2016 - 09/2016

- Built the codebase for air highways in C++ and PX4 Autopilot using 3D spline parameterization
- Designed the drone autonomous system using a GPS-based PID system

TrackerAPI - github.com/belalmksaid/TrackerAPI

07/2014 - 08/2014

- Wrote a platform that lets users create custom APIs for dynamic data on a website of the user's choice
- **Won first place at CodeDay NY 2014**

Extracurriculars

IEEE - PacBot Team Captain - github.com/belalmksaid/PacBotCode

10/2015 - Present

- Created an algorithm for the bot to navigate a maze and avoid the ghosts, optimized to run on teensyduino. The robot was designed using a custom PCB circuit and a 3D printed body
- **Won first place at Harvard PacBot Competition 2017**

International Sanitation Organization - internationalsanitation.org

07/2013 - Present

- Helped found and fundraise for ISO, a legal 501c3 certified non-governmental organization, which has collaborated with UN recognized organizations to bring fresh water to thousands of people in Ghana
